1. Installation of Android Studio and Android Virtual Device

step-by-step guide for installing **Android Studio** and setting up an **Android Virtual Device (AVD)**, perfect for a student hangout or practice session:

🖥️ Step 1: Download and Install Android Studio

- Go to the official site: developer.android.com/studio.
- Download the installer for your operating system (Windows, macOS, or Linux).
- Run the installer and follow the setup wizard:
  - Accept the license agreement.
  - Choose installation location.
  - Select components (Android SDK, Android Virtual Device, etc.).
- Finish installation and launch Android Studio.

⚙️ Step 2: Configure Android Studio

- On first launch, Android Studio will ask to install additional SDK components.
- Accept the recommended settings.
- Let the setup wizard download and install the Android SDK, SDK tools, and emulator.

📱 Step 3: Create an Android Virtual Device (AVD)

1. Open **Android Studio**.
2. Go to **Tools > Device Manager**.
3. Click **Create Device**.
4. Choose a hardware profile (e.g., Pixel 6).
5. Select a system image (choose the latest stable Android version).
6. Configure emulator settings (RAM, storage, orientation).
7. Click **Finish** to create the AVD.

▶ Step 4: Run the Emulator

- In **Device Manager**, select your AVD and click **Play**.
- The emulator will boot up like a real Android phone.
- You can now test apps directly on this virtual device.

Building a simple "Hello World" app together and run it on your emulators.
